Art Unit: 1641

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-9, drawn to an assay device, classified in class 436, subclass
 518.
- II. Claims 10-15, drawn to an assay system, classified in class 422, subclass 50.
- III. Claims 16, drawn to a method for assaying a biological sample, classified in class 435, subclass 4.
- IV. Claim 17, drawn to a method for assaying a biological sample, classified in class 435, subclass 7.1.
- V. Claim 18, drawn to a method for assaying a biological sample, classified in class 435, subclass 7.92.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and (III-V) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product of Group I can be used in a materially different process of using that product such as any one of the methods in Groups III-V.

Application/Control Number: 10/036,066

Art Unit: 1641

Inventions I and II are unrelated, patentably distinct and independent inventions. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not disclosed as capable of use together and they have different modes of operation, because invention I does not require a computer software.

Inventions III-V are unrelated, patentably distinct and independent inventions. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions III and IV are not disclosed as capable of use together and they have different modes of operation, because invention IV does not require selecting a planar surface having an array of substrates. Inventions III and V are not disclosed as capable of use together and they have different modes of operation because invention V does not require selecting a planar surface having an array of substrates. Inventions IV and V are not disclosed as capable of use together and they have different modes of operation because inventions IV and V are not disclosed as capable of use together and they have different modes of operation because invention IV does not require using an ultrasonic nebulizer.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Application/Control Number: 10/036,066

Art Unit: 1641

Because these inventions are distinct for the reasons given above and the search required for one group is not required for the other groups, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ann Y. Lam whose telephone number is 571-272-0822. The examiner can normally be reached on M-Sat 11-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Long Le can be reached on 571-272-0823. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
